

Course Syllabus

GRAD-E1213: Advanced Climate Policy

1. General information

Course Format	Onsite
Instructor(s)	Prof. Dr. Christian Flachsland
Instructor's e-mail	flachsland@hertie-school.org
Assistant	Alwine Hoppe, hoppe@hertie-school.org
Instructor's Office Hours	Please email Alwine Hoppe

Link to [Study, Examination and Admission Rules and MIA, MDS and MPP Module Handbooks](#)

For information on **course room, times and session dates**, please consult the [Course Plan](#) on *MyStudies*.

Instructor Information:

Christian Flachsland is Professor of Climate Policy and Founding Director of the Centre for Sustainability at the Hertie School. He is also a Research Fellow at the Mercator Research Institute on Global Commons and Climate Change (MCC), where he previously led the "Governance" group. His research focuses on the design, governance, and political economy of climate and energy policy. He coordinates the research on governance in the Ariadne project, a major research consortium, funded by the German Federal Ministry of Education and Research (BMBF) and tasked with assessing climate policy options for Germany and Europe. He was a contributing author to the Fifth Assessment Report on the Mitigation of Climate Change by the IPCC. This term Christian teaches the following courses: Advanced Climate Policy and Emissions Pricing (with Lion Hirth).

2. Course Contents and Learning Objectives

Course contents:

This class introduces students to key concepts and topics in the field of contemporary climate policy. We focus on public policies for mitigating climate change, with EU climate policy serving as the main, albeit not the only, case study. The class draws heavily on economics and political science concepts but remains non-formal throughout (no calculus required). The first part of the class (sessions 1-4) introduces the key physical, economic, technological, welfare, and political dimensions of climate change policy. Students learn core analytical frameworks, concepts, and topics. The second part (sessions 5-8) offers a deep dive into the analysis and design of domestic climate policy instruments and institutions, providing an overview of the field as well as introductions into the relevant economics and political science perspectives. The final part (Sessions 9-12) introduces international climate policy, a discussion of recent developments and upcoming challenges in EU climate policy, and student teams' case study project presentations.

Grading tools include one policy brief, a mid-term exam, student presentations (and a first draft), and a final paper.

Main learning objectives:

Students will develop a deep knowledge of frameworks, concepts, and key topics required for analyzing and understanding public policies for climate policy. They will learn how to apply economic and political science tools to analyse real-world problems in the transformation to greenhouse gas emissions neutrality.

Target group:

Students with a strong interest in the field of climate policy. This is a reading-intensive class geared towards preparing students interested in working in this (or adjacent) policy field(s).

Teaching style:

A combination of reading (a significant volume of) introductory and state-of-the-art analytical texts, pre-recorded and in-class lectures introduces basic concepts and information about key climate change policy topics. In-class lectures are punctuated and followed by discussions of the learning contents, related topics, readings and real-world policy developments. Several sessions draw on applied economic concepts, but their treatment remains non-formal (no calculus required for grading-relevant readings and exercises). In-class group debates, case study project presentations and discussions are intended to foster exchange among students. The policy brief, group presentations and in-class debates are designed to enhance the students’ ability to research topics in a concise and timely manner using a variety of resources, to effectively present material in written and oral formats, and to develop their teamwork management skills. The mid-term exam offers an opportunity to review and discuss key concepts taught in this class.

Prerequisites:

Strong interest in climate policy.

Diversity Statement:

Respect for diversity and aiming for inclusion: It is my intent that students from all diverse backgrounds and perspectives be well served by this course, that students’ learning needs be addressed both in and out of class, and that the diversity that students bring to this class be viewed as a resource, strength and benefit. It is my intent to present materials and activities that are respectful of diversity: gender, sexuality, disability, age, socioeconomic status, ethnicity, race, and culture. I would also like to help create an inclusive classroom for everyone. Your suggestions are encouraged and appreciated. Please let me know ways to improve the effectiveness of the course for you personally or for other students or student groups.

3. Grading and Assignments

Composition of Final Grade:

Assignment 1: Policy Brief	Deadline: 1 st assignment provided in week 1, due in time for class in week 3, on 27.02.2024 at 11:00 am	Via Moodle	15 %
Assignment 2: Mid-term exam	Date tbd, 60 minutes	Onsite	35 %

Assignment 3: Draft group presentation outline	Deadline: at least 2 weeks prior to presentation	Via email 24-hrs prior to meeting with instructor	5 %
Assignment 4: Group Presentation	Sessions 11 & 12	In-class	10 %
Assignment 5: Final Paper	Date: 22.05.2024, 6pm	Via Moodle	35 %

Grading is based on one policy brief (15%); a mid-term exam (35%); a draft group presentation outline (5%); a presentation (10%); and a final paper (35%).

Assignment Details

Assignment 1 – Policy Brief

Students are confronted with a climate policy problem and are asked to develop a 1.000-word policy brief analyzing the problem and suggesting actionable options. The assignment is handed out in the first session and is due two weeks later.

Assignment 2 – Mid-term exam

Mid-term exam, 60 min. You explain and apply concepts from required readings and lectures to demonstrate your understanding of them.

Assignment 3 – Presentation outline

Student teams are required to consult with the instructor regarding the orientation and outline of their presentation at least two weeks prior to the presentation, better earlier. Students are responsible for scheduling this meeting well in advance. Meeting slots are proposed by the instructor. Students are expected to send a 1-2-page outline of the presentation 24hrs prior to the meeting (will be graded); a presentation draft is very useful. Details on scheduling meetings will follow in class.

Assignment 4 – Group presentation

Students will choose group presentation topics from suggested case study options. Proposing topics is also possible but needs to be coordinated with and confirmed by the instructor. Allocation of students to their topic will take place early in the semester to facilitate preparation. The presentations will take place in Sessions 11 and 12.

Assignment 5 – Final Paper

Student teams write a policy paper with max. 2.500 words per student (e.g. a group of three students would write a 7.500-word paper). The policy paper topics and questions addressed are largely identical with those of the presentations. The mandatory meetings for preparing presentations can also be used for discussing the paper outline. Students can opt for receiving one joint grade, or clearly indicate which student wrote which distinguishable part of the joint paper to receive separate grades. Submission of the policy paper via Moodle by 22.05.2024, 6pm.

Late submission of assignments: For each day the assignment is turned in late, the grade will be reduced by 10% (e.g. submission two days after the deadline would result in 20% grade deduction).

Attendance: Students are expected to be present and prepared for every class session. Active participation during lectures and seminar discussions is essential. If unavoidable circumstances arise which prevent attendance or preparation, the instructor should be advised by email with as much advance notice as possible. Please note that students cannot miss more than two out of 12 course sessions. For further information please consult the [Examination Rules](#) §10.

Academic Integrity: The Hertie School is committed to the standards of good academic and ethical conduct. Any violation of these standards shall be subject to disciplinary action. Plagiarism, misuse of AI, free riding in group work, and other deceitful actions are not tolerated. See [Examination Rules](#) §16, the Hertie [Plagiarism Policy](#), and [the Hertie Guidelines for Artificial Intelligence Tools](#).

Compensation for Disadvantages: If a student furnishes evidence that he or she is not able to take an examination as required in whole or in part due to disability or permanent illness, the Examination Committee may upon written request approve learning accommodation(s). In this respect, the submission of adequate certificates may be required. See [Examination Rules](#) §14.

Extenuating circumstances: An extension can be granted due to extenuating circumstances (i.e., for reasons like illness, personal loss or hardship, or caring duties). In such cases, please contact the course instructor and Examination Office *in advance* of the assignment deadline.

4. General Readings

Stern, N. (2006). *Stern Review. The Economics of Climate Change*. Executive Summary. 1-27.

5. Course Sessions and Readings

All course readings can be accessed on the course Moodle page.

Session 1: The climate problem at a glance	
Required Readings	Bernauer, T. 2013. Climate Change Politics. <i>Annual Review of Political Science</i> 16. 421-448. Stern, N. 2006. <i>Stern Review. The Economics of Climate Change</i> . Executive Summary. 1-27.
Optional Readings	Heal, Geoffrey. 2017. 'The Economics of the Climate'. <i>Journal of Economic Literature</i> 55(3): 1046-63. Weitzman, Martin L. 2015. 'Book Review—A Review of William Nordhaus' <i>The Climate Casino: Risk, Uncertainty, and Economics for a Warming World</i> '. <i>Review of Environmental Economics and Policy</i> 9(1): 145-56.

Optional podcasts	Nobel Laureate William Nordhaus: The Economics of Climate Change Minghao Qiu: Introduction to Economics and Policy of Climate Change: How Will You Design a Climate Policy? Robert Pindyck: Averting and Adapting to Climate Change Martin Weitzman: The Problem from Hell
-------------------	---

Session 2: Climate Change Physics and Impacts

Required Readings	<p>Flachsland & Kersten. 2024a: Introduction to Climate Change Physics.</p> <p>Flachsland & Kersten. 2024b: Introduction to Climate Change Impacts.</p>
Optional Readings	<p><i>IPCC, 2023: Climate Change 2023: Synthesis Report. Contribution of Working Groups I, II and III to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change [Core Writing Team, H. Lee and J. Romero (Eds.)]. IPCC, Geneva, Switzerland. First. Executive Summary</i></p> <p>Dessler, Andrew E. 2021. <i>Introduction to Modern Climate Change</i>. 3rd edition. Cambridge: Cambridge University Press, Chapters 3 and 4</p> <p>Otto, Friederike E.L. 2023. 'Attribution of Extreme Events to Climate Change'. <i>Annual Review of Environment and Resources</i> 48(1): 813–28.</p> <p>McSweeney, Robert, and Zeke Hausfather. 2018. 'Q&A: How Do Climate Models Work?' <i>Carbon Brief</i>.</p> <p>Tziperman, Eli. 2022. <i>Global Warming Science: A Quantitative Introduction to Climate Change and Its Consequences</i>. Princeton: Princeton University Press, Chapter 2 and one chapter of your choosing on the type of impact you are most interested in</p> <p>Hsiang, Solomon, and Robert E. Kopp. 2018. 'An Economist's Guide to Climate Change Science'. <i>Journal of Economic Perspectives</i> 32(4): 3–32.</p>
Optional podcasts	<p>Climate Science 101: Fundamentals of Climate Science. 2017. Greenhouse Effect, Senate Environment and Public Works Committee, December 10, 1985 (Carl Sagan).</p>

Session 3: Global net zero GHG transition

Required Readings	<p>Flachsland & Kersten. 2024c: Global net zero GHG transition pathways</p>
Optional Readings	<p>UNEP (2023a) Exec. Summary</p> <p>UNEP (2023b) Exec. Summary</p> <p>IEA (2023) Exec. Summary</p> <p>Levin et al 2023: What Does "Net-Zero Emissions" Mean? 8 Common Questions, Answered. World Resources Institute blog</p> <p>Gillingham, Kenneth, and James H. Stock. 2018.
